

My First Website

Cloud9

1. Create a Cloud9 Account <https://c9.io/>
2. *Immediately* go to your email and set your password for Cloud9 (the link will expire very quickly)

Dashboard

3. Create a new workspace. Choose a short name without spaces, like “csp-2017”. Leave the “Clone from Git or Mercurial URL” box empty, and make sure that the **HTML5** template is selected, as shown.

Workspace name

your-project-name

Description

Make a short description of your workspace

Hosted workspace

Clone workspace

Remote SSH workspace

Salesforce

☐ Private

This is a workspace for your eyes only

☐ Public

This will create a workspace for everybody to see

Clone from Git or Mercurial URL (optional)

e.g. ajaxorg/ace or git@github.com:ajaxorg/ace.git

Choose a template

HTML5

Node.js

PHP, Apache & ...

Python

Django

Ruby

C++

Wordpress

Rails Tutorial

Blank

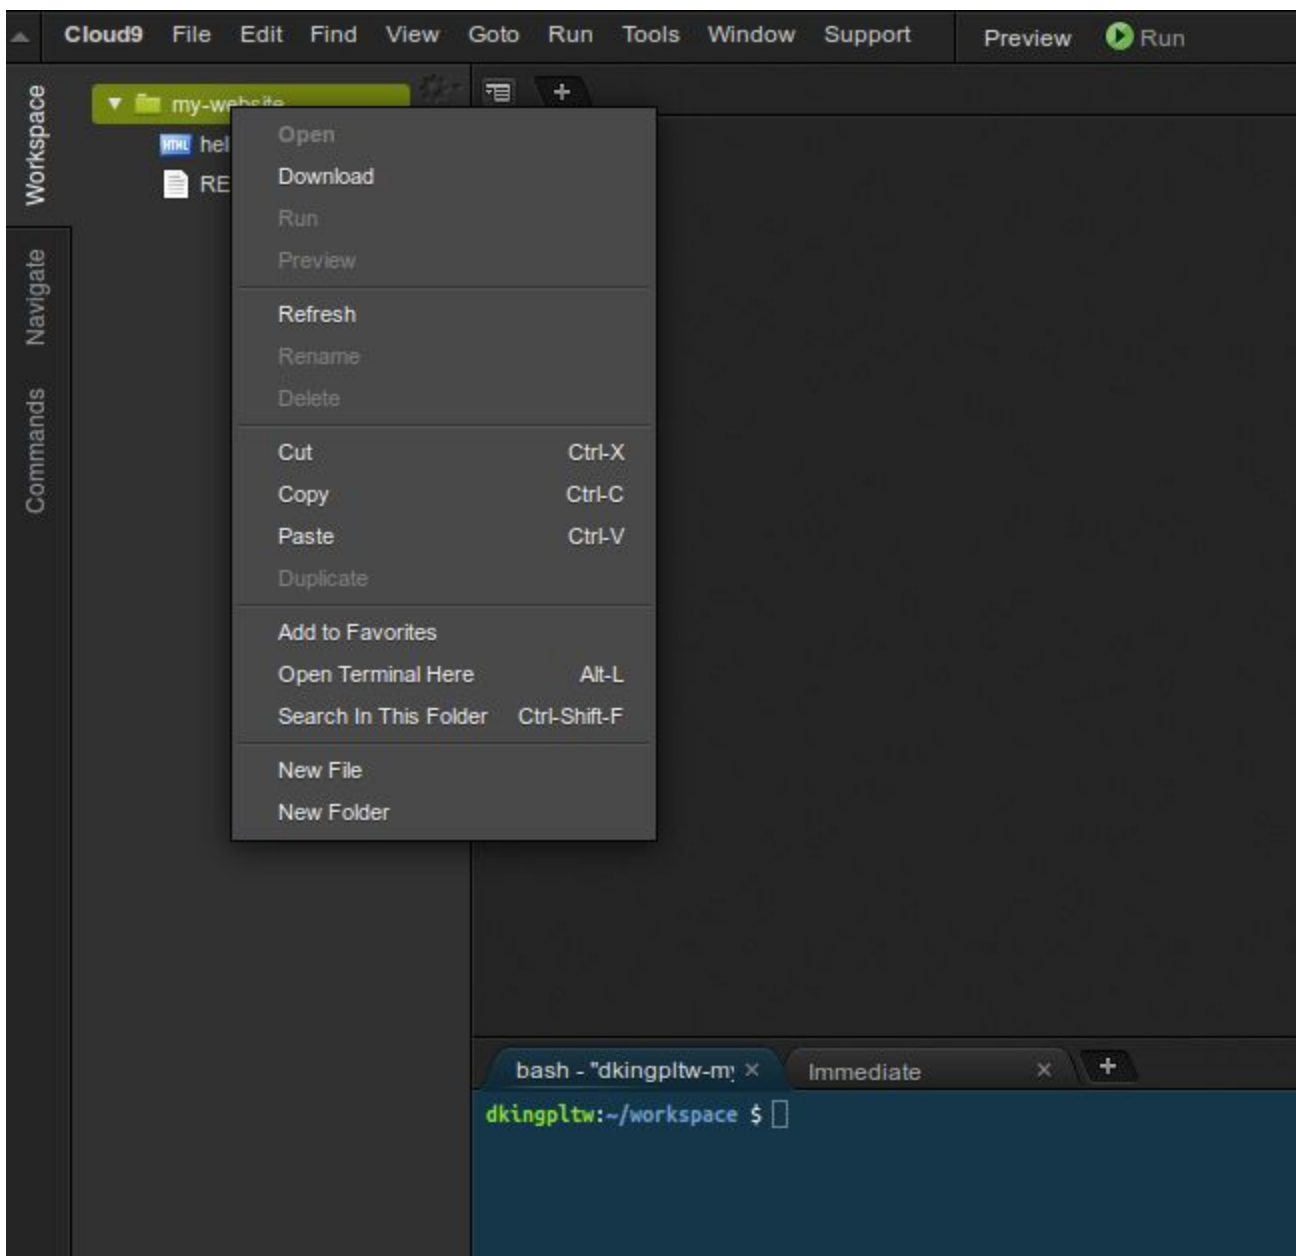

Harvard Univer...

Create workspace

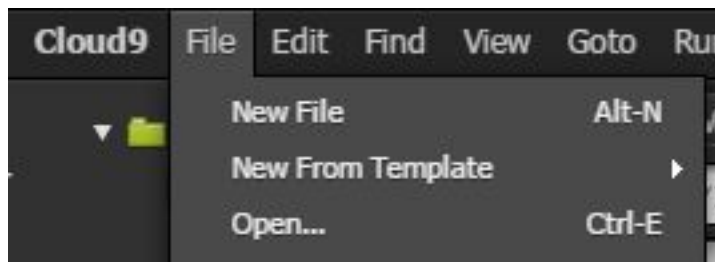

3. Click “Create workspace”. This will take a bit.

Add index file

4. Create a new folder named *my_website* in your Cloud9 workspace. You can do this by right-clicking on the top folder in the sidebar, as shown below.

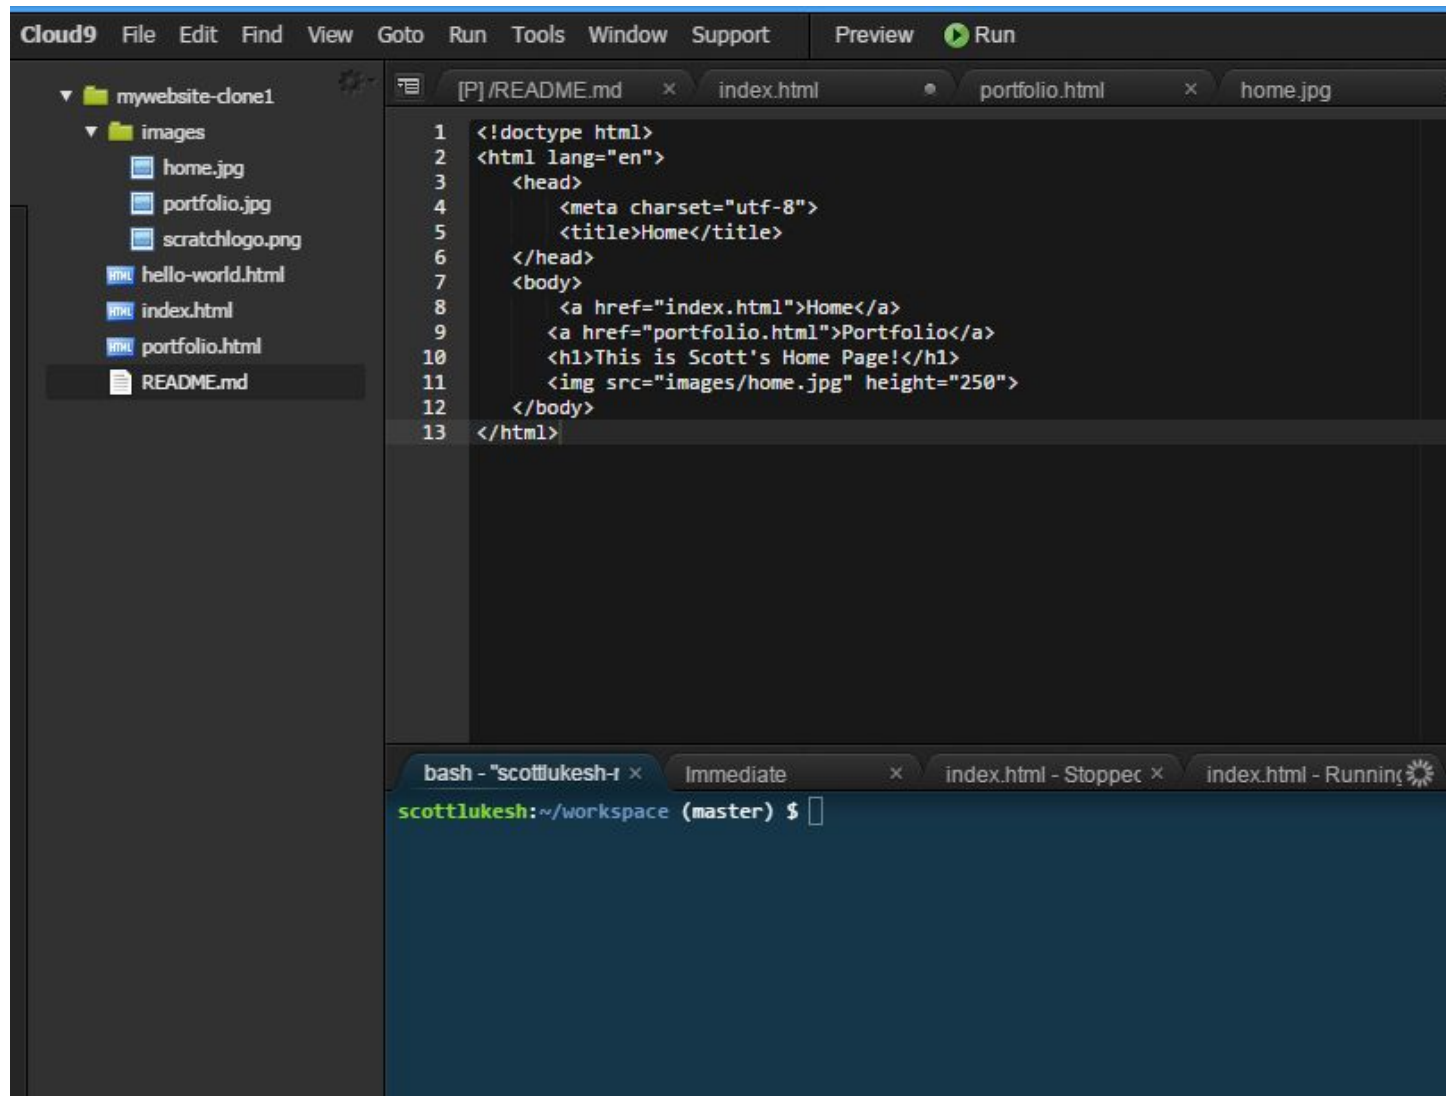

5. Create a *New File*, as shown below.

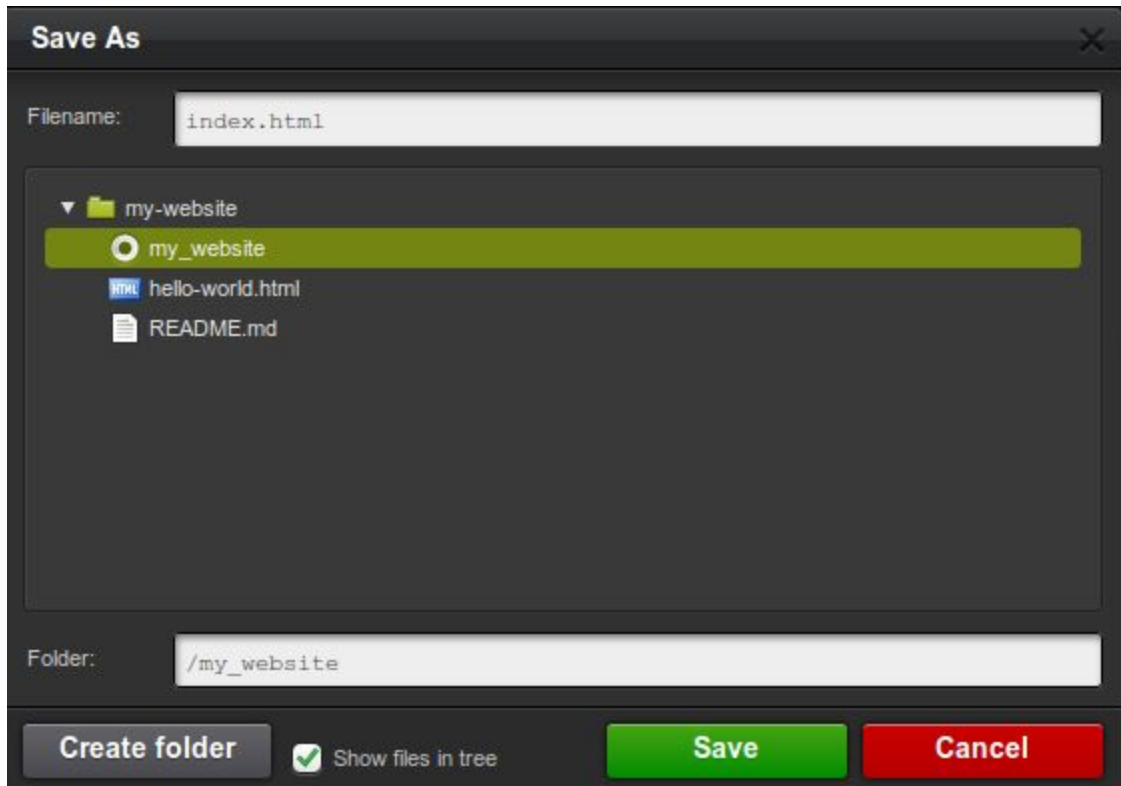

Paste this **HTML** code into the editor:

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <title>Home</title>
  </head>
  <body>
    <a href="index.html">Home</a>
    <a href="portfolio.html">Portfolio</a>
    <h1>This is my test Home Page!</h1>
    
  </body>
</html>
```

Save file inside the *my_website* folder with the name *index.html*.

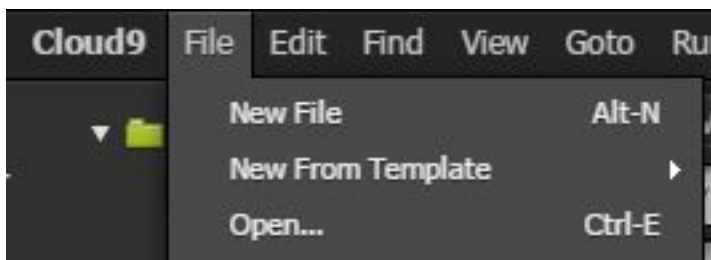

After saving the file, the syntax of your code should be highlighted with different colors, as shown below (your colors may be different than mine).

```
1 <!doctype html>
2 <html lang="en">
3   <head>
4     <meta charset="utf-8">
5     <title>Home</title>
6   </head>
7   <body>
8     <a href="index.html">Home</a>
9     <a href="portfolio.html">Portfolio</a>
10    <h1>This is my test Home Page!</h1>
11    
12  </body>
13 </html>
```

Add portfolio file

5. Create another *New File*.

Paste this html code into the editor.

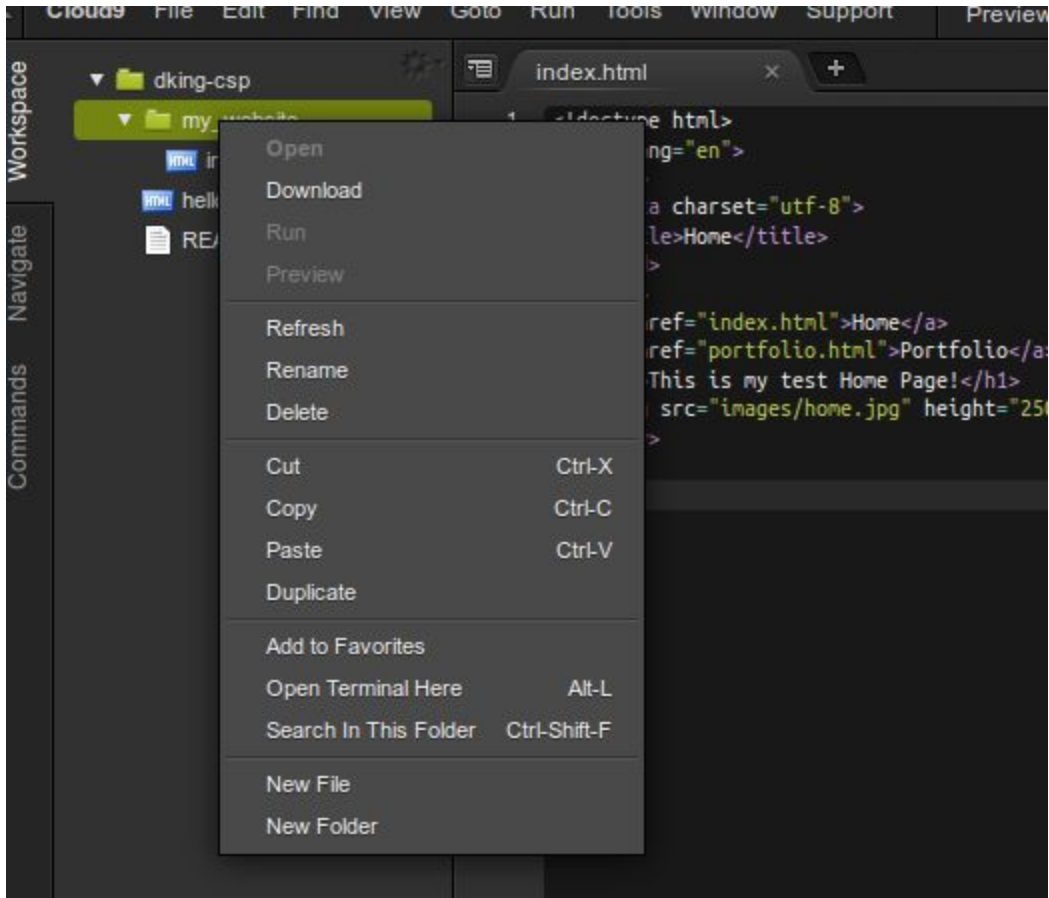

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <title>Portfolio</title>
  </head>
  <body>
    <a href="index.html">Home</a>
    <a href="portfolio.html">Portfolio</a>
    <h1>This is my Portfolio Page!</h1>
    
    <br>
    <a target="_blank" href="https://scratch.mit.edu">
      
    </a>
  </body>
</html>
```

Save the file in the *my_website* folder with the name *portfolio.html*.

Once again, the syntax should highlight with different colors once the file is saved.

Add Images

6. Create a folder named *images* inside your *my_website* folder. To do this, right-click on the *my_website* folder in the Cloud9 sidebar:

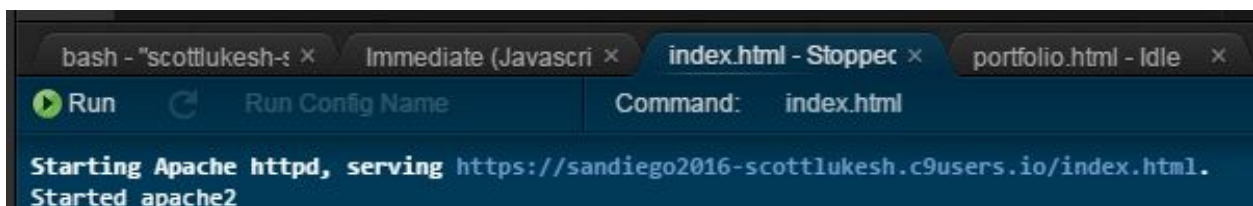

7. Download these images to your computer:

<https://drive.google.com/open?id=oB5m4e6ZkvPXLXzJaaUlHcm9KM2s>

Now, drag and drop the image files onto the *images* folder that you just created on Cloud9.

8. Now, let's make your website live! (sort of)

Click on index.html tab and run.

Now go to the website listed!
